

WWT HydroHammer™

WWT HydroHammer™ Extended-Reach Tool
Goes Toe-to-Toe with Competition and “Pulls” Out a Win

WWT HydroHammer™ “Pulls” Out a Win

- **APPLICATION:** Plug-Milling
- **PUMP RATE:** 3.5 BPM
- **PULSE HEIGHT:** 1000 psi
- **FREQUENCY:** 3-4 Hz

Executive Summary

- With the increasing percentage of laterals longer than 10,000 feet, operators are looking for extended-reach tools (ERTs) that can successfully and quickly reach TD. WWT’s HydroHammer™ ERT was put up against an operator’s preferred ERT vendor. Performance was identical, but at a much-lower cost.

Solution

- With the ability to handle acid, lost-circulation material, and sand, WWT’s HydroHammer™ is the right choice for a low-cost alternative to other ERTs

Results

- Pulse height is directly correlated to downhole-tool performance. Running WWT’s HydroHammer™ in the BHA performs identically to the competition at half the price
